

1 Download the App

1. Tap on the **Google Play Store** on your device
2. Tap on the magnifying glass and search for DAT OnTime
3. Tap **INSTALL** to get the App

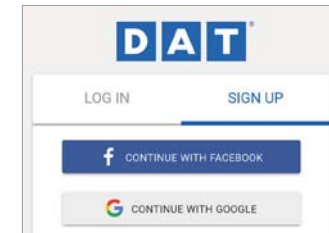

2 Location Updates

For DAT OnTime to work, you have to have GPS (location services) turned on. Follow the instructions on your screen to enable it.

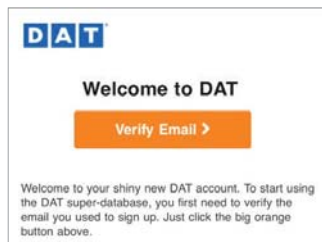

3 Sign Up

You can save time by signing in with either the **Facebook** or **Google** info that's already saved in your phone, or you can set up a login with your email address.

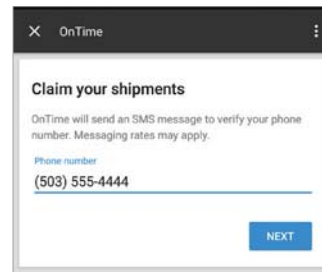

4 Verify Your Email

Once your account is created, you'll get a confirmation email to make sure we have the right address. Once verified, you'll be sent back to the **LOG IN** screen. Enter your email address and password and tap the **LOG IN** button.

5 Verify Your Number

Once you enter your number, you'll get a text with a verification code to make sure no one is pretending to be you. Enter the 4-digit code you received and tap **SUBMIT**.

6 Control Tracking

You can pause and resume tracking at any time. Just click the location pin icon in the upper right of the screen.

NOTE: when tracking is paused, the broker cannot see where the load is, and if you arrive with tracking turned off, you won't have proof of when you got to the receiver.
